DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference characters "3, 4 and 8" have been used to designate external electrodes and "metallization, reinforcing layers and joining layer", respectively. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 27-52 are rejected under 35 U.S.C. 103(a) as being obvious over Bindig et al. (US 6208026).

Bindig et al. disclose a piezoelectric actuator (1) having external electrodes (6) composed of a layer of metallization (4), having a joining layer (7).

However, it fails to disclose the basic metallization with discontinuities or recesses.

Takeuchi et al. teach the discontinuities for the purpose of preventing the deterioration of a frequency characteristic in a piezoelectric vibrator.

It would have been obvious to one skilled in the art at the time the invention was made to use the discontinuities disclosed by Takeuchi on the actuator disclosed by Binding for the purpose of preventing the deterioration of a frequency characteristic in a piezoelectric vibrator.

Art Unit: 2834

3. With regards to claim 28 and 29, the combination described above discloses the claimed invention where the metallization is formed by a mechanical process.
4. With regards to claims 30 and 34-40 the combination described above discloses the claimed invention except for the claimed ranges. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the optimum ranges as claimed, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.
5. With regards to claims 31-33, the combination as described above discloses the claimed invention. (Column 3, Lines 38-67)
6. With regards to method claims 43-52, it has been held that to be entitled to weight in method claims, the recited structure limitations therein must affect the method in a manipulative sense, and not to amount to the mere claiming of a use of a particular structure. Ex parte Pfeiffer, 1962 C.D. 408 (1961).

Response to Arguments

7. Applicant's arguments filed on May 19/2003 have been fully considered but they are not persuasive. Examiner acknowledges that the fissures in the base metallization are the main difference between the cited prior art and the claimed invention. However, this limitation is not included in the claims. Therefore, the rejection is maintained.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

Art Unit: 2834

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
